Tri-Technical Systems Announces Release of Store-Floor Price Checker

Dubuque, Iowa - Tri-Technical Systems is proud to introduce a new solution to its product suite: Store-Floor Price Checker Solution. This price checker package includes both hardware and software components. On the store floor retailers can place one or multiple price checker devices. These units simply connect with your existing PC network.

On the PC workstation or the V7 Polling PC, users need to configure each price checker unit to link with a V9.0 AIMsi location or with a V7 Polling store (the price checker can be linked with either software solution) via the Price Checker Software. Then activate the connections. That is it!

Customers can bring an item up to the price checker and they will quickly learn the price of the product and if it is currently on sale. Sales staff can also use the unit to verify pricing. Connect multiple devices throughout a store to 1 software application.

“Tri-Tech is excited about the release of our new price checker solution,” as stated by project manager Amber Earles. “This hardware/software combo will help retailers better engage their customers without creating a lot of extra work and system upkeep. In an age where stores compete for customers and general pricing differences are usually within a few cents, one way a store can retain their clientele is by offering a better customer experience. Store-floor price checkers allow customers to verify pricing quickly and easily. By tying that price checker unit directly into the POS, the price will always be up to date without any extra work for the store owner.”

Product Features:

- Displays current pricing by linking directly to V9.0 AIMsi or to V7 Polling
- Displays sales prices if applicable
- Connect multiple devices to 1 software module
- Generate reports of "Not Found" items to help in updating product lists
- Print or Export report data
- Displays SKU/PLU info on the PC screen as the items are scanned on the store floor

AIMsi is a complete point of sale (POS), inventory management, accounting and business software application. V9 has been PA-DSS certified and uses tokenization for credit card and auto pay processing. The software offers retailers not only a way to control inventory, manage customers and track sales, but also offers fully integrated custom add-on modules such as Repair & Service tracking, Lesson Scheduling, Short Term Rentals, Rent and Sales Contracts, Contact Management, Emailing capabilities, Tee Scheduler and a Time Scheduler.

V7 Polling is a robust software application to connect select TEC, Sam4s, Sharp and CASIO cash registers to the PC. V7 supports saving, editing and sending or register maintenance programs, such as PLU & UPC data. It also allows

users to collect report data from the PC. The software includes advanced functionality for report data analysis such as report consolidation & graphing and interfaces to V9.0 AIMsi inventory for complete item tracking.

About Tri-Technical Systems

Since its foundation in 1984, Tri-Technical Systems has become an industry leader in providing business solutions to retailers.
